IMPROVE EFFICIENCY, PERFORMANCE AND SUSTAINABILITY

Sealed Air's innovative FasFil® EZ® Auto paper void fill system delivers a perfect solution for small-cell packing stations. It is specifically designed for customers who need a packaging system that improves performance, productivity, shipping quality — and offers responsible packaging.

SMARTER, FASTER, AND EASIER

The FasFil® EZ® Auto system lets any packaging operation run at its best. Simple footswitch operation produces continuous paper output with the press of a foot pedal and the built-in automatic cutting mechanism allows for easy release of paper.

MORE CHOICES FOR BETTER RESULTS

A variety of options help you improve efficiency by saving time, energy and material:

- The FasFil® EZ® Auto system is engineered to produce paper void-fill in both manual and programmed length modes. In program length mode, the easy to use digital length control dial delivers customized paper lengths with each press of the foot pedal.
- Small footprint and standard electrical requirements allow for flexible positioning. System can be mounted on a floor stand or on a table and adjusted to desired height and angle.
- The FasFil® EZ® Auto system can run with a choice of roll stock and fanfold paper configurations. FasFil® EZ® Auto paper is available in 3 different basis weights to ensure optimal protection.

SUSTAINABILITY

FasFil® EZ® Auto paper material is made from 100% recycled content, responsibly sourced and carries SFI certification. It can be recycled with mixed paper. Additionally, the fiber is 100% renewable and all production scrap is reclaimed.
